

# Diego Andre Gomez Ruiz

Software Developer · Maple, ON

[diangoru@my.yorku.ca](mailto:diangoru@my.yorku.ca) · [github.com/DA-Gomez](https://github.com/DA-Gomez) (<https://github.com/DA-Gomez>)

[linkedin.com/in/diego-andre-gomez-ruiz](https://www.linkedin.com/in/diego-andre-gomez-ruiz) (<https://www.linkedin.com/in/diego-andre-gomez-ruiz>)

I build backend systems and the interfaces on top of them. Right now I'm co-founding **Preneur**, a two-sided home-services marketplace in public pre-launch, and finishing a B.A. in Information Technology at York University.

Before that I was at an enterprise consultancy, shipping C#/.NET and Vue platforms for multinational clients. I like problems where correctness is the hard part — idempotent writes, event ordering, schemas designed around the queries that will actually hit them.

**Looking for:** a software engineering internship or new-grad role, backend or full-stack.

## TECHNICAL SKILLS

---

### Languages

JavaScript · TypeScript · C# · Java · Python · SQL (PostgreSQL) · C++ · C · HTML/CSS

### Frameworks & Platforms

.NET / ASP.NET Core · Entity Framework Core · React · Vue · Node.js · Express.js · FastAPI · NumPy · Pandas · Firebase · AWS · Azure · GCP

### Tools & Concepts

Docker · Git/GitHub · GitHub Actions · Linux · RabbitMQ · Redis · PostgreSQL · REST APIs · Microservices · Event-Driven Architecture · ML (scikit-learn) · CI/CD · Agile

## PROFESSIONAL EXPERIENCE

---

### Co-Founder & Lead Developer · Preneur

Toronto, ON · Apr 2025 – Present

- Architected a two-sided home-services marketplace spanning job posting, contractor discovery, chat, scheduling, and reviews across 82 React 19 and TypeScript modules; now in public pre-launch.
- Built a config-driven geospatial search engine powering contractor and job browsers from one hook via geohash bounding-box queries, distance ranking, and cursor pagination.
- Designed a NoSQL schema around query shapes using version-controlled composite indexes and deterministic document IDs, making schedule upserts idempotent and collapsing a lookup query into a direct read.
- Enforced unidirectional data flow across 10 Redux Toolkit slices, reads through Firestore listeners and writes through async thunks, so multi-step drafts survive reloads while server collections rehydrate live.

---

### Software Developer Intern · ADS Business Transformation Experts Inc.

Toronto, ON · Apr 2024 – Sept 2025

- Contributed to the development of enterprise business-transformation platforms for multinational clients, such as Holcim, hosted in Azure and built with C#/.NET and Vue.js
- Collaborated with a team of 3 engineers to build and improve systems for 4 enterprise clients serving hundreds of internal users.
- Translated client stakeholder requirements into sprint tickets and walked completed work through in demo sessions, carrying features from intake through client acceptance.

## TECHNICAL PROJECTS

---

### Stock Intelligence Platform

*C#/.NET 8 · Python · FastAPI · PostgreSQL · RabbitMQ · Docker · React*

- Architected a four-layer Clean Architecture backend in .NET 8 with CQRS handlers, EF Core 8, PostgreSQL, and JWT auth, verified by 130 tests running real infrastructure through Testcontainers.
- Achieved no duplicate writes across runs of a live SEC EDGAR Form 4 ingestion pipeline using unique-index idempotency, a token-bucket rate limiter, and exponential-backoff retry.
- Eliminated a PostgreSQL-to-RabbitMQ dual-write failure mode with a transactional outbox and polling relay, then routed events to a Python analytics microservice over manual acks, TTL retry, and dead-letter queues.
- Shipped an LLM recap service as a second consumer on the topic exchange, generating per-user summaries of insider activity under structured output validation, token budgeting, and Redis TTL caching.

---

### Context-Aware Wardrobe Recommendation App

*Node.js · Express · Python · Firebase · React*

- Co-led a 4-person team through a full-stack build, owning system architecture, API design, and Git/GitHub workflow.
- Engineered a Node.js/Express backend on Firestore handling wardrobe CRUD, weather-data normalization, and real-time recommendation feedback.
- Designed a recommendation engine pairing rule-based filtering with a scikit-learn model invoked through `child_process` to score and rank outfit combinations.

## EDUCATION AND LEADERSHIP

---

### Registered to:

Diego Andre Gomez Ruiz

B.A., Spec. Hons. Information Technology

GPA 3.7

Sept 2023 – May 2027 (expected)

### Awards:

- Dean's List
- Continuing Student Award for Academic Excellence

**Co-President** · Student Excellence in ITEC Initiative (SEICI)

York University · Jun 2025 – Present

- Promoted from member to Co-President for the 2026–2027 term, setting organizational goals and leading executive decisions for York's ITEC student initiative.
- Own the annual operating roadmap across Fall and Winter terms, assigning timelines and an accountable owner to every workshop, technical project, and milestone.

### Certifications:

- AWS Certified Cloud Practitioner · Amazon Web Services In Progress
